# 1 Introduction

This section provides an brief overview of the entire document.

## 1.1 Purpose

The purpose of this Detailed Design Document is to provide a description for the detailed design of the ParkFinder app. The description of the design will allow anyone who will be involved in the development of the system to proceed with an understanding of what is to be built and how it is expected to be built. This document provides a description of the system's classes and static structure, as well as diagrams that describe the dynamic behaviour of a system in response to external stimuli, and diagrams that describe the interactions among classes in terms of an exchange of messages over time.

The intended readers of this document include all of the project's stakeholders. This includes the end-user, the software engineers, and the park authorities.

## 1.2 System Description

The software system being described in this document is called the ParkFinder app. This system will have datasets of information about parks from all over the world and will allow the client to use search methods in order to find parks based on the clients' desired attributes. The app is meant to be used anywhere in the world, provided an Android or iOS device with the app installed. This provides clients with an easier, faster, and more efficient way to look up parks and acquire information such as the location, facilities, activities, and rentals that the parks provide.

## 1.3 Overview

The remainder of this document will contain diagrams and information that will describe the details for the software system being built. This will include State Charts for controller classes in Section 2, Sequence Diagrams in Section 3, and a Detailed Class Diagram in Section 4.

# 2 State Charts for Controller Classes

This section should provide a state chart for each controller class for your application.

# 3 Sequence Diagrams

This section should provide a sequence diagram for each use case of your application.

## 4 Detailed Class Diagram

In this section the class diagram for each main package of the parkFinder app will be displayed individually, then they will all be combined into one large class diagram.

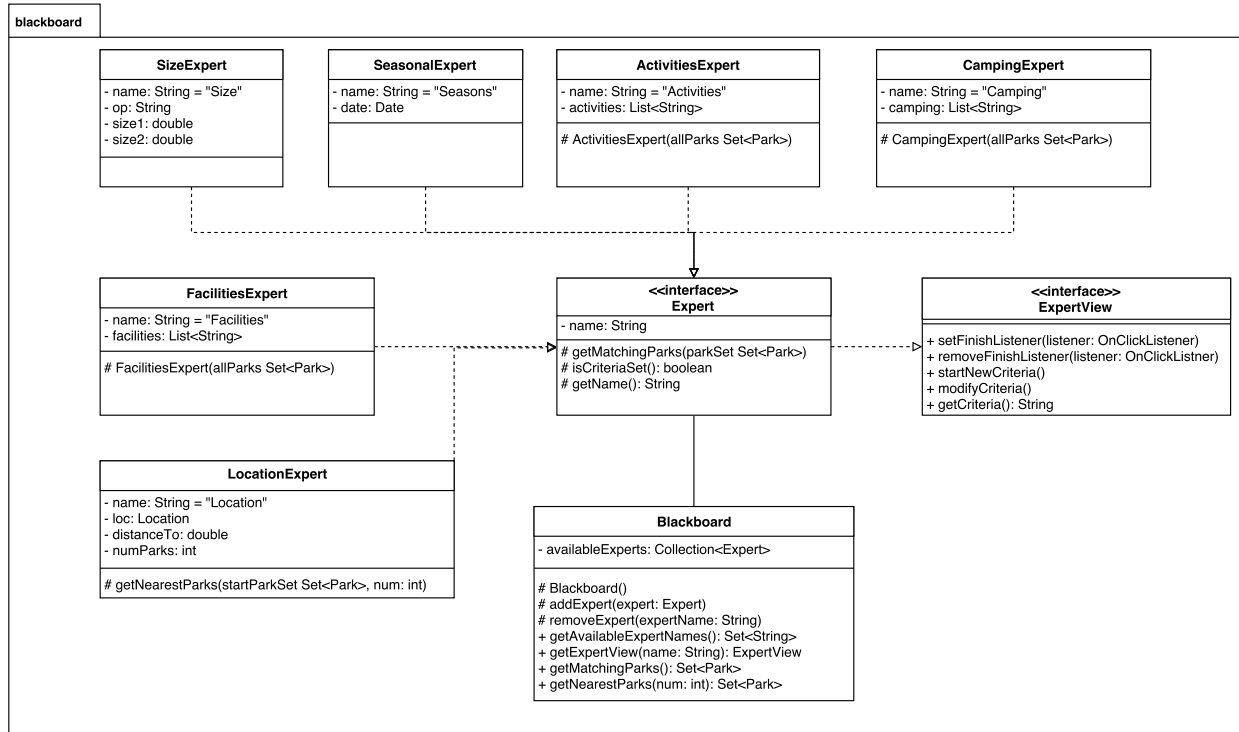

Figure 1: Class Diagram of the blackboard package

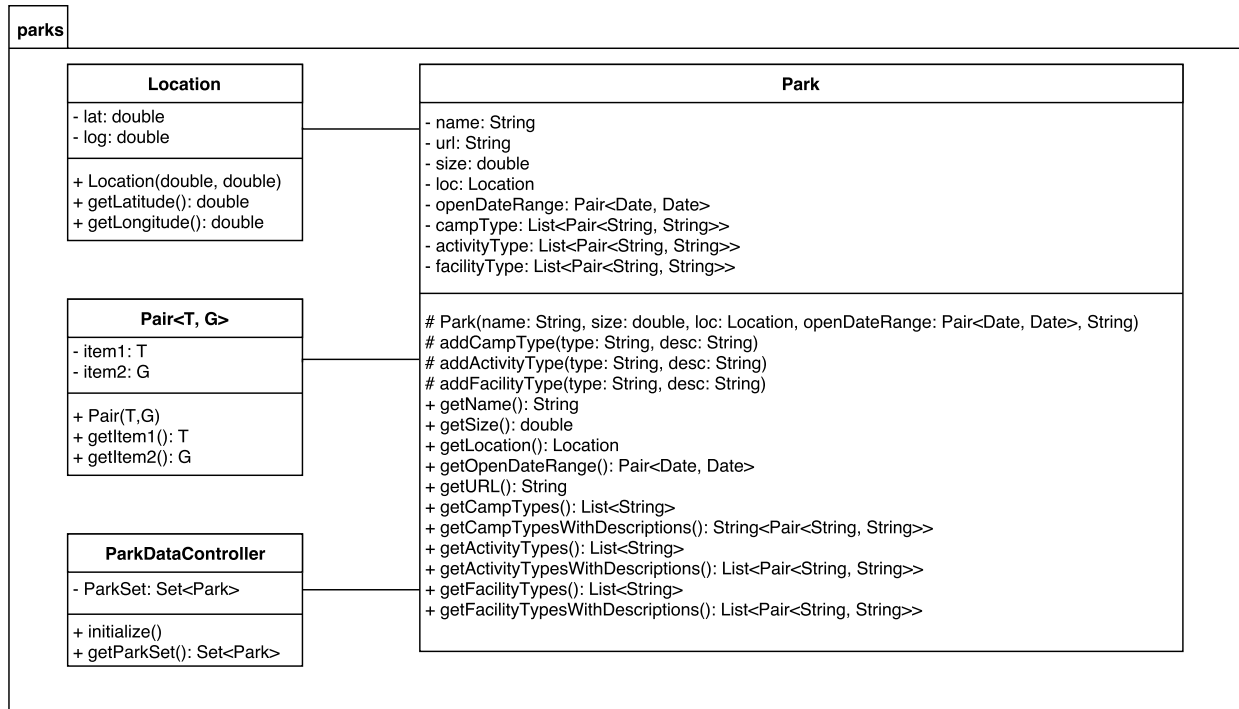

Figure 2: Class Diagram for the parks package

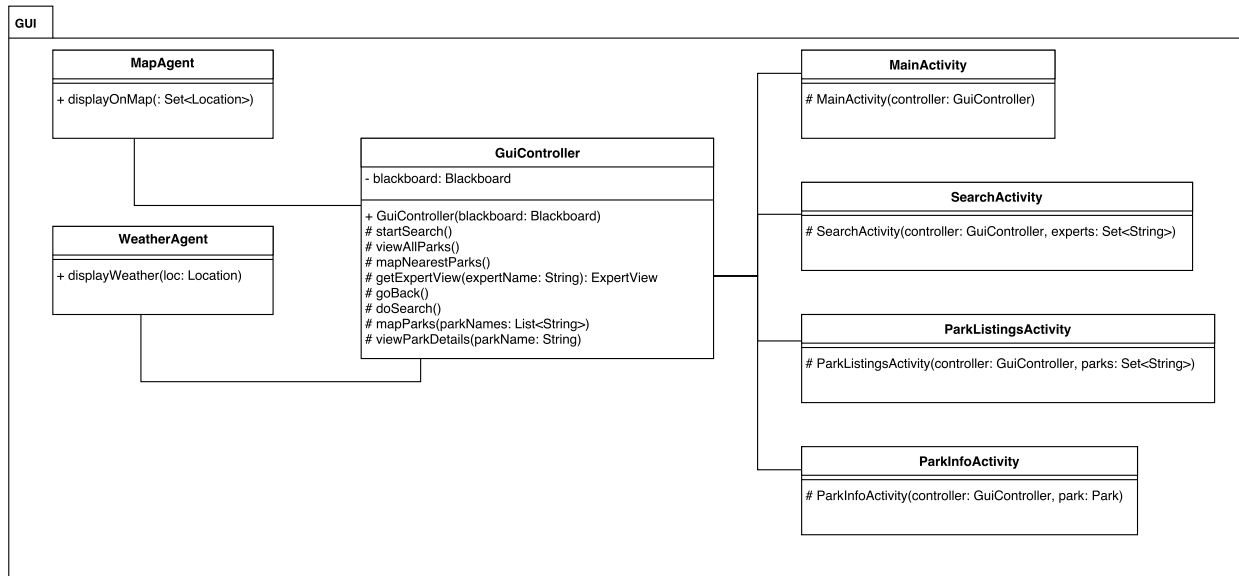

Figure 3: Class Diagram for the gui package

# IMPORTANT NOTES

- You do NOT need to provide a text explanation of each diagram; the diagram should speak for itself
- Please document any non-standard notations that you may have used
  - *Rule of Thumb*: if you feel there is any doubt surrounding the meaning of your notations, document them
- Some diagrams may be difficult to fit into one page
  - It is OK if the text is small but please ensure that it is readable when printed
  - If you need to break a diagram onto multiple pages, please adopt a system of doing so and thoroughly explain how it can be reconnected from one page to the next; if you are unsure about this, please ask me
- Please submit the latest version of Deliverable 1 and Deliverable 2 with Deliverable 3
  - They do not have to be a freshly printed versions; the latest marked versions are OK
- If you do NOT have a Division of Labour sheet, your deliverable will NOT be marked
